Physics Department Seminar

Friday April 19th, 2002

11:00am in PhSc 105

“CD Recording Technologies”

Mr. Tim Sweeney
Department of Physics
California State University, Chico

Abstract:

Since 1972 optical data storage appeared as a viable media. The types of discs that have been created can be written once, never and many times over. This talk is meant to explain these types of media and how information is read and written to disc.
