“Supercritical Fluid Extraction”

Mr. Roy Fisher
Department of Physics
California State University, Chico

Abstract:

Coffee drinker? Then you probably owe supercritical fluid extraction (SFE) a big thank you. In a search for “cleaner” and more environmentally friendly processes SFE has emerged as an easy and reliable way to extract a host of substances both in a classroom laboratory and in industry at large. This talk will present the concept of SFE and its benefits both to chemist and coffee drinkers alike.
