### Abstract:

Physics and the industry of gambling machines may seem like strange bedfellows but have some common themes. They both require strong problem solving skills and a strong sense of team.

International Game Technology is the world leader in slot machine and video gaming machine design and production. Gambling devices have existed since recorded history. The slot machine is a relatively new diversion,

combining entertainment with the chance to win the prize of a lifetime. This presentation will discuss the history, theory of operation, and manufacturing process of gaming machines. Understand what your chances are to win the \$10,000,000 Mega Jackpot prize!
