“A Career in Quality”

Mr. David Snyder

Continuous Improvement Specialist
Georgia Pacific

Abstract:

Today's quality professionals are a mix of coach, engineer and statistician. Using data analysis, cross-functional teams and problem solving techniques quality personnel are called upon to constantly drive out variation. I will be presenting an example of a successful project from last year at a Georgia Pacific chemical facility and explaining the improvement methodology. While you would probably not use everything you learned while gaining your Physics Degree you can find an enjoyable career.
