“After The Black Diamond”

Ms. Lindsay Rowland

Physics Teacher
Champion Christian School

Abstract:

After the Black Diamond, the Green Squares seem downright tame. I speak about how a study of physics has better prepared me for any experience in life, not just lab work. Now in the credential program at Chico State and interning as a physics and math teacher, I find that I have a major advantage over my colleagues because I majored in physics. I will also talk about the aspects of my job (which will include anecdotes and demonstrations), for those who may have an interest in pursuing a similar career path.
