11:00am in PhSc 105

“Non-Newtonian Fluids: The Corn Starch Project”

Mr. Andrew Fisher

Department of Physics
California State University, Chico

Abstract:

Recently a video showcasing our favorite non-Newtonian fluid, cornstarch, has been circling the web. But what are non-Newtonian fluids? Is there more than one type of non-Newtonian fluid? Why does anyone care? The answers to these questions, and more will be found at my talk. If there's time, I may also talk a little bit about what I've been doing with them this semester.
