11:00 am in PhSc 105

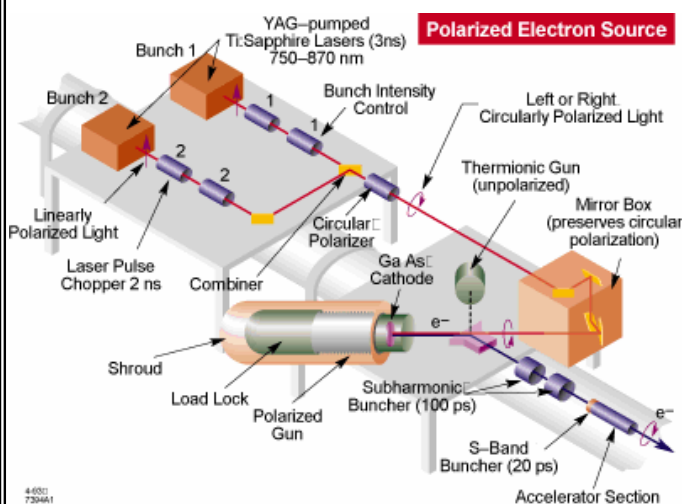

## “Magnets, Electrons, & the Speed of Light: A Young Physicist’s Adventures at SLAC”

Mr. Andrew Fisher

Stanford Linear Accelerator Center

### Abstract:

In today's world of physics, new high energy physics is constantly happening. SLAC is one of the places at the forefront. I'll discuss a few of the projects going on at SLAC right now, and what part a young Chico State graduate is playing, and what skills can help a person in today's physics lab.
